**Startup Instructions:**

Use any web browser (but preferably Chrome) to test our prototype. Go to the link
above, and the prototype should be accessible to you. (Note that this is a figma
prototype, not an actual HTML).

**Briefing:**

We are doing a class project, and our project idea is about redesigning the student aid
website for corona pandemic relief. We felt that the existing website lazily lumped
information together for the user to navigate through rather than taking the time to
streamline information based on their needs. The link above shows you the interface
we've built, and you should perform the tasks below on the interface as a way for us to
discover our design flaws.

**Description of Tasks:**
- Checking off that they have all the necessary documentation
  - Check off the list as you have gathered the necessary information to
    complete the COVID-19 relief form.
- Logging in a FAFSA account and then logging out.
- Applying for Aid
  - Complete the form as if your partner lost a job and submit the form.
- Learning Financial Aid Policies
  - Review the FAFSA policies for financial aid to learn about how to stay
    eligible and the overall requirements.
- Review FAFSA Form Submission
  - Check the 2019 submission and email it to 123abcd@gmail.com.
